DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-22 and 28-39, drawn to a method for determining a first physicochemical property, classified in class 435, subclass 7.1.
 - II. Claims 23-24, drawn to a kit comprising a first and second carrier, classified in class 422, subclass 68.1.
 - III. Claims 25-27, drawn to a kit comprising microspheres, classified in class 436, subclass 518.
2. The inventions are distinct, each from the other because of the following reasons:
3. Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the kit as claimed can be used to practice the materially different process of liquid purification by filtering analytes from a liquid solution using two carriers to simultaneously bind to at least two different analytes in a flow cell.

Art Unit: 1641

4. Inventions I and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the kit as claimed can be used to practice the materially different process of liquid purification by filtering analytes from a liquid solution, the process consisting of the steps of immobilizing the subsets of microspheres in a flow cell, wherein the targets and capture molecules on the microspheres bind to analytes in a liquid solution that is passed through the flow cell.

5. Inventions II and III are unrelated, independent, and distinct inventions. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation and different functions. Invention II is a kit that includes a first and second carrier, which are limitations that are not in Invention III. Invention III is a kit that includes microspheres, which is a limitation that is not in Invention II.

Therefore, Inventions II and III have different modes of operation and different functions that distinguishes them as unrelated, independent, and distinct inventions.

Art Unit: 1641

6. Because these inventions are distinct for the reasons given above and the search required for each of Groups I-III is not required for the other Groups, restriction for examination purposes as indicated is proper.

7. A telephone call was made to Mark Benedict on 2 September 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Leon Y Lum whose telephone number is (571) 272-2878. The examiner can normally be reached on 8:00am-5:00pm.
